## Introducing the Bench Rest Die Set

One Full Length Sizing Die and one Bench Rest Seater Die

For every rifle caliber you own, we recommend that you have a Full Length Sizing Die and a Bench Rest Seater Die. The Bench Rest Die Set includes one Full Length Sizing Die and one Bench Rest Seater Die, all packaged in our Deluxe Die Box. See listings on pages 6-7.

### Custom Machining Services

We can manufacture custom versions of any of five Reloading Dies to your specifications.

# Bench Rest® Sizing Dies

## Features

- Manufactured from the finest quality steel.
- Carefully machined on super precision® chucking lathes to very tight tolerances.
- Manufactured with one-piece reamers to help guarantee concentricity between all machined diameters.
- Heat treated and oil quenched in atmospherically controlled furnaces to an extremely tough Rockwell hardness.
- Hand polished in a high-speed lathe both before and after heat treating guarantee an extra-fine finish.
- Equipped with our exclusive “E-Z” Out® Expander Ball, which helps solve the problem of keeping case necks concentric during the neck expanding operation.

The combination of our elevated “E-Z” Out Expander Ball and butyl rubber Co-Ax® Washer corrects misalignment of the Decapping/Expander Assembly and prevents the case neck from pulling off center during the expanding procedure.

Our design also reduces the effort required to draw the “E-Z” Out Expander Ball through the case neck because it takes full mechanical advantage of the power developed in the linkage of your press. The elevated position of the Expander Ball means that the expanding operation happens with the press handle near the bottom, where it produces the most leverage. The expanding operation is hardly felt, making sizing much less laborious.

## Full Length Sizing Die

Produces ammunition that has a “glove fit” to your chamber. Use after each firing or after several firings, when the resulting brass flow will require the case to be full-length sized.

Fig. 1 shows the “E-Z” Out® Expander Ball placed high on the Spindle in the Decapping/Expander Assembly, near the neck of the case.

Fig. 2 shows the case being withdrawn from the Die. Note how the elevated position of the “E-Z” Out® Expander Ball supports the case neck in the neck sizing portion of the Die, keeping the axis of the neck and the case in perfect alignment.

## Web

The “E-Z” Out Expander Ball system requires that the Decapping/Expander Assembly be adjusted properly at all times. The Decapping/Expander Assembly is set at the factory; however, if the “E-Z” Out Expander Ball is readjusted and set too high in the die, case neck and spindle damage will result. Our website has complete user instructions.

## Features

- Sizes the case neck, shoulder, and body. Deprimes and expands the case neck. Allows the case to be re-chambered in a SAAMI minimum size rifle chamber.
- Precisely positioned vent hole located in the threaded or recessed portion of the die body prevents excessive, trapped air and lubrications from damaging the die's components or your cases.

**Note:** When using military brass with crimped primers, use a decapping die first to remove spent crimped primers (not available from Forster Products).

## Ordering Information

Full Length Sizing Dies are available in more than 70 calibers, either individually or as part of the Bench Rest Die Set with a Bench Rest Seater Die. **Die ordering information begins on page 6.**

## Custom Machining Services

We can custom hone up to .008" the inside neck diameter of our Full Length Sizing Dies. Custom honing is a diamond stoning process that enlarges the inside diameter of the Die and will prevent oversizing of the case neck due to thick neck walls. You may need this service:

- If you use some brands of brass cases, such as Norma or Lapua, that have thicker neck walls.
- If you do not intend to outside neck turn case necks that have thickened after repeated firings.

See our website for details.

# Bench Rest® Sizing Dies

## Bushing Bump Neck Sizing Die

Developed with input from some of the world's most discriminating reloaders and competitive shooters, our unique design allows precise case neck and shoulder sizing in one easy step.

### Features

- Sizes the case neck and shoulder to set headspace and deprimers.
- One-step bushing reduction/bump operation sets the shoulder back to keep your case neck in better alignment with the case's center line.
- Prevents overworking of case necks, as well as controls the amount of neck tension for your bullet seating operation.
- Over 90 available bushings allow case necks to be sized to your exact requirements.
- Versatility allows you to custom size your cases to your specifications.

### Ordering Information

Bushing Bump Neck Sizing Dies are available either individually or in a kit with three pre-selected bushings most likely needed to produce accurate ammunition with proper neck tension. The kit also includes our Deluxe Die Box.

Die ordering information begins on page 6.

Bushings are available separately. If you're making cartridges for a tight chambered rifle, you might need smaller bushings. Alternatively, you might need larger bushings if you are not outside neck turning and are using brass cases with thick neck walls. Most sizes are available in .001" increments; just order by the inside diameter desired.

See Table 1 for Bushing ordering information.

### Partial Neck Sizing

You can adjust the bushing to allow partial case neck sizing, allowing the unsized section to better align the cartridge in the rifle chamber.

### Bump the Shoulder without Changing the Case Neck Diameter

By removing the neck bushing, you can use the Bushing Bump Neck Sizing Die to bump just the case shoulder without changing the neck diameter. This action maintains proper headspace in any chamber, custom or factory setting.

Order number equals inside diameter of Bushing.

**Example:** Order Number Bush-230 is a Bushing with an inside diameter of .230".

# Bench Rest® Seater Dies

## Features

- Innovative, caliber-specific Die Chamber (Fig. 3) holds the case, the bullet, and the seating stem all in perfect alignment; supporting the entire outside diameter of the sized case rather than just the bullet and case neck. (Most competitors' products support only the case rim.)
- Non-crimping style provides accuracy, consistency, and perfect alignment. (Exception: 30-30 caliber Die does crimp.)
- Seating stems supplied with our standard seaters match even special bullet needs such as those encountered during the loading of most Very Low Drag (VLD) bullets.

The secret to perfect alignment is holding the bullet, case and seating stem in the same close fitting chamber for the entire seating operation.

Fig. 3 shows how both the bullet and the entire case are held in perfect alignment while the bullet is seated.

## Bench Rest Seater Die

First die of its kind on the market and is still the best straight line Seater Die available.

### Feature

- Holds both the bullet, case and seating stem in perfect alignment while the bullet is seated.

### Ordering Information

Bench Rest Seater Dies are available in more than 70 calibers or as part of the Bench Rest Die Set with a Full Length Sizing Die.

Ordering information begins on page 6.

Fig. 4 shows how the bullet is held in the same close-fitting chamber for its entire length.

Fig. 5 shows the position of the sliding Die chamber (P-30) after the bullet has been seated.

## Bench Rest Ultra™ Micrometer Seater Die

Fine adjustments for precise seating measurements the very first time.

### Ordering Information

Ultra Micrometer Bench Rest Seater Dies are available in more than 70 calibers.

Ordering information begins on page 6.

Fig. 6 shows how the bullet is held in the same close-fitting chamber for its entire length.

Fig. 7 shows the position of the sliding Die chamber (P-30) after the bullet has been seated.

## Features

- Includes all the popular straight line seating features of our original Bench Rest Seater Die plus an ultra accurate micrometer for adjusting bullet seating depth.
- Micrometer allows fine adjustments in either direction; easily adjustable to .0005". Index marks at increments of .001" are clearly marked.
- After you have seated your bullet close to the desired depth and measured it, simply adjust the micrometer stem down to the desired depth and the cartridge will be exactly the length you need.
- Eliminates much of the trial and error that was once associated with seating accurate rounds.
- Bright, white markings make micrometer easy to read.

# Bench Rest® Reloading Die Tools

## Cross Bolt Die Lock Ring

Clamps around the entire die, resulting in a more precise mating of the lock ring threads to the die threads.

DIE-G-10

### Features

- Easy-to-use cross bolt connects the two ends of the ring instead of a traditional screw design that tightens directly into the threads of the die, resulting in a more precise mating of the lock ring threads to the die threads.
- Provides a more reliable alignment with no canting, and no damage to the die threads, which remain undamaged.
- Standard equipment on all Forster Products high-quality Sizing and Seater Dies.
- Tightening or loosening the steel cross bolt screw requires only a 7/64" hex key (Allen wrench).
- Fits standard 7/8"-14 thread dies from most manufacturers.

Order No.	Description
DIE-G-10	Cross Bolt Die Lock Ring (single ring)
DIE-G-10-DOZEN	Cross Bolt Die Lock Ring (pack of one dozen)

## Stuck Case Remover

The easy way to remove the Decapping Rod and Expander Ball when a case is stuck in the Die.

SC1000

Product in Use

### Features

- Designed for use with Forster Sizing Dies which feature the elevated "E-Z" Out Expander Ball in the Decapping/Expander Assembly.
- May also be used with sizing dies that use 1/4"-28 or 10-32 thread spindles.
- All components hardened for long life.
- Washer protects the top of your die.

Order No.	Description
SC1000	Stuck Case Remover

**WARRANTY**

All Forster Products are warranted against defects in materials and workmanship for the life of the product. Parts excluded from the warranty are those that, by nature of their function, are subject to normal wear (such as springs, pins, etc.) or that have been altered, abused, or neglected. If the product is deemed defective by workmanship or materials, it will be repaired, reconditioned or replaced (at Forster's option). This warranty supersedes all other warranties for Forster Products, whether written or oral.
